WALL - 30"

*After losing both of their sump pumps, a chemical company needed a quick fix for an unusually tight spot. Come to the rescue, two Concertor Pumps from Flygt, installed pronto by Kennedy Industries.*

### PROBLEM:

A chemical manufacturer in Trenton, MI, had lost both their BJM sump pumps and suddenly found themselves in a bind. Their previous repair didn't even last two years before seal failure had reoccurred. Adding to the problem was that this failure occurred Friday afternoon and lost production seemed imminent.

### SOLUTION:

Kennedy Industries, a full stocking distributor for Flygt, had the two pumps that would provide the most versatility for the customer in stock. Flygt's Concertor pumping solution offers the flexibility to manage the production flows now, and increase the flows in the future, with a simple settings change. Kennedy's field service personnel worked Saturday removing the old bases and installing the new Flygt Concertor pumps. The new system was up and running in less than 24 hours from the customer's initial call, which was their biggest relief of all.

*As a result, this chemical company now has much more reliable equipment that provides greater versatility and efficiency.*

Flygt's Concertor's compact design and integrated system fit perfectly.

Kennedy added controls to drive greater efficiencies and flexibility.
