

**IRRIGATION SYSTEM DOWN? AVOID THE BROWN!
EMERGENCY SOLUTION SAVES GREEN AND GREENS**

FAILED ORIGINAL PUMP SYSTEM

PROBLEM: A local golf course, in a panic, called Kennedy Industries and reported they had lost all of their irrigation pumps due to catastrophic failure. The course had no practical way to get water to its fairways and greens. The course was at imminent risk of losing the entire course and its business for the entire season as high temperatures and a lack of precipitation were only days away. They needed a solution and fast!

ALL HANDS ON DECK, KENNEDY DISPATCHES THREE SERVICE TECHS

SOLUTION: Our team immediately constructed a plan, and a day later had a crew out demolishing the old skid. A rental Flygt NS-3301.180 85HP submersible pump paired with a variable frequency drive unit was custom installed to provide 400 GPM @ 90 psi allowing the course to irrigate the fairways and greens. This will allow the facility to remain open for the summer and preserve their business for the 2017 season. The customer has a new pump skid on order that will be installed after the 2017 season. The project required extensive on-site demolition and fabrication to allow the pump to fit the well, but it was no problem for Kennedy field service team. With the course back up and running the customer can now focus on making green rather than losing it.
